

**SCHOOL OF COMPUTER SCIENCE AND ENGINEERING  
CONTINUOUS ASSESSMENT TEST - I  
WINTER SEMESTER 2025-2026**

	<p>Remaining keywords: patient, exhibits, elevated, blood glucose, persistent fatigue, possible, type-2 diabetes</p> <p><b>C. Morphological Analysis (Stemming/Lemmatization)</b>-Reduces words to base forms</p> <p>Examples: exhibits → exhibit elevated → elevate indicating → indicate</p> <p>Benefit: Helps in identifying medical concepts accurately</p> <p>Part-of-Speech (POS) Tagging-Assigns grammatical roles to each word</p> <p>Examples: patient → Noun elevated → Adjective blood glucose → Noun Phrase diabetes → Noun</p> <p>Role in summarization: Helps identify: Symptoms, Conditions, Medical entities</p> <p>Named Entity Recognition (NER)-Identifies medical entities</p> <p>Extracted entities: Symptom: persistent fatigue Lab indicator: elevated blood glucose Disease: type-2 diabetes</p> <p>Importance:-Crucial for clinical summarization and diagnosis assistance</p> <p><b>D. Syntactic Analysis (Parsing)</b>-Analyzes sentence structure and relationships</p> <p>Understanding relationships: Elevated blood glucose + fatigue → indicate → possible type-2 diabetes</p> <p>Outcome: Establishes cause-effect and symptom-disease links</p> <p><b>E. Semantic Analysis</b>-Interprets the meaning of the sentence, Uses medical ontologies</p> <p>Semantic inference: High blood glucose + fatigue = strong indicators of diabetes "possible" indicates uncertainty (important in clinical context)</p> <p><b>F. Information Extraction</b></p> <p>Selects only clinically relevant facts: Condition suspected Key symptoms Diagnostic indicators</p> <p>Extracted information: Elevated blood glucose, Persistent fatigue, Possible type-2 diabetes</p> <p>Text Summarization</p> <p>Uses extractive or abstractive summarization: Extractive: selects important phrases Abstractive: rewrites in concise medical language</p> <p><b>Generated Summary:</b> "Elevated blood glucose and fatigue suggest possible type-2 diabetes."</p> <p>Post-Processing &amp; Validation-Ensures: Medical accuracy, No loss of critical information, Concise format suitable for doctors</p> <p><b>G. Final Output Summary</b>- "Elevated blood glucose and persistent fatigue indicate possible type-2 diabetes."</p>

**WINTER SEMESTER 2025-2026**

	<p>Therefore <i>like</i>: P (0.001584) (backpointer: V → P) Word 4: “arrows” N From P → N → 0.001584 × 0.8 × 0.60 = 0.00076032 Therefor at <i>arrows</i>: N (0.00076032) (backpointer: P → N) <b>Most probable tag sequence:</b> time flies like arrows N V P N</p> <div style="text-align: center;">  </div>				
5.	<p>A news aggregation company is building a rule-based NLP system to extract key phrases (Noun Phrases and Verb Phrases) from short news headlines. Because headlines are short, linear, and mostly follow fixed POS patterns, the development team decides to use a Finite State Transducer (FST) for Shallow parsing instead of a full syntactic parser. The system receives POS-tagged input and must output chunk labels. Consider the following headline: <b>“The skilled engineer designed a bridge”</b></p> <p>The chunking rules followed by the system are:</p> <ul style="list-style-type: none"> <li>• NP → (DET) (ADJ) N*</li> <li>• VP → V (NP)?</li> </ul> <p>Perform the following operations:</p> <ol style="list-style-type: none"> <li>i. Assign each token with the POS tag for the given sentence.</li> <li>ii. Design a Finite State Transducer (FST) for identifying Noun Phrase (NP) chunks. <ul style="list-style-type: none"> <li>• Clearly mention the states, transitions, and accepting states.</li> </ul> </li> <li>iii. Extend the FST to handle Verb Phrase (VP) chunking.</li> <li>iv. Apply the designed FST to the given POS-tagged sentence and generate the labels for each word and write the final shallow-parsed output by grouping words into chunks.</li> <li>v. Discuss the advantages and limitations of shallow parsing techniques and explain the applications of shallow parsing in NLP systems. [0+3+2+2+3]</li> </ol> <p><i>Solution:</i></p> <p><b>1. Shallow parsing (chunking) using an FST</b></p> <p>Rules: <b>NP → (DET) (ADJ) N*</b></p>	3	10	CO3	BL4

**SCHOOL OF COMPUTER SCIENCE AND ENGINEERING**
