

SCHOOL OF COMPUTER SCIENCE AND ENGINEERING
CONTINUOUS ASSESSMENT TEST - I
FALL SEMESTER 2025-2026

Programme Name & Branch : M.Tech. (Integrated) Computer Science and Engineering, Datascience (MIC & MID)
Course Code and Course Name : CSI2003 - Advanced Algorithms
Faculty Name(s) : Dr. Lakshmanan K, Dr. Adaline Suji, Dr. Sunija. A P
Class Number(s) : VL2025260102348, 2491, 2581
Date of Examination : 22/08/2025
Exam Duration : 90 minutes **Maximum Marks: 50**

General instruction(s):

- Answer All Questions.
- If any notation is not explained, then it refers to the standard notation for the problem.

Q. No	Question	M	CO	BL																		
1.	a) Find an optimal solution to the fractional knapsack problem using greedy strategy for an instance with number of items $n=5$, Capacity of the sack $W=14$, profit associated with the items (p_1, p_2, p_3, p_4, p_5) and weight associated with each item (w_1, w_2, w_3, w_4, w_5) are given in the table below. Workout the steps involved in the process of finding the solution. <table><tr><td>Items</td><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td></tr><tr><td>Weight</td><td>2</td><td>3</td><td>5</td><td>7</td><td>1</td></tr><tr><td>Profit</td><td>10</td><td>5</td><td>15</td><td>7</td><td>6</td></tr></table> Solution: 39 b) Recall the Huffman coding algorithm. The algorithm you learnt in the class works for the binary alphabet $\{0,1\}$. Suppose you are asked to modify the algorithm that works for ternary alphabet $\{0,1,2\}$ and construct a tree accordingly such that each node can have a maximum of three children. Below is the half-filled code of the new algorithm for the ternary alphabet, where C is the character set and $f(p)$ are the frequency of the character p, $p = \{x, y, z\}$ and Q is the data structure queue. Your job is to fill in the blanks of the code mentioned in the lines 3,6,7,8 and 9. <pre>1 $n \leftarrow C$ 2 $Q \leftarrow C$ 3 for $i \leftarrow 1$ to $(n-1)/2$ 4 do allocate a new node w 5 $left[w] \leftarrow \text{EXTRACT-MIN}(Q)$ 6 $center[w] \leftarrow \text{EXTRACT-MIN}(Q)$ 7 $right[w] \leftarrow \text{EXTRACT-MIN}(Q)$ 8 $f[w] \leftarrow f[x] + f[y] + f[z]$ 9 INSERT(Q, w) 10 return EXTRACT-MIN(Q)</pre>	Items	1	2	3	4	5	Weight	2	3	5	7	1	Profit	10	5	15	7	6	6+4	1	2
Items	1	2	3	4	5																	
Weight	2	3	5	7	1																	
Profit	10	5	15	7	6																	
2.	Given two DNA strings $X = \text{DDABCCA}$ and $Y = \text{DABBDCAC}$ you need to find a third string Z with maximum length that appear in both original strings of X and Y in the same order by deleting arbitrary letters of X and Y. Which effective method you use to solve the given problem and find a solution using such a method.	10	1	2

<i>C</i>	0	1	2	3	3	3	4	4	4																																																																																					
<i>C</i>	0	1	2	3	3	3	4	4	5																																																																																					
<i>A</i>	0	1	2	3	3	3	4	5	5																																																																																					
3.	Consider a 0/1 Knapsack Problem with the following data: <table><tr><td>Item</td><td>Weight</td><td>Profit</td></tr><tr><td>1</td><td>2</td><td>10</td></tr><tr><td>2</td><td>3</td><td>15</td></tr><tr><td>3</td><td>4</td><td>14</td></tr></table> The knapsack capacity is 6 units i. Construct the State-Space Tree using the FIFO Branch and Bound method. Clearly indicate: • Bounding function(s) The order of node expansions. • Nodes that are pruned (not expanded further under which BF is failed). ii. Find the Optimal Solution (subset of items chosen and the maximum profit achieved). Solution: 25	Item	Weight	Profit	1	2	10	2	3	15	3	4	14	10	1	2																																																																														
Item	Weight	Profit																																																																																												
1	2	10																																																																																												
2	3	15																																																																																												
3	4	14																																																																																												
4.	Compute the shortest path between all vertices for the given graph, using Floyd Warshall algorithm and mention its time complexity.  Solution:	10	2	3
